

Who Would Benefit?

Cranial Osteopathy, (also known as Osteopathy in the Cranial Field), can help people with many different disease processes. Treatment restores motion, improves vitality, and brings about a higher state of function. Because the focus is on health and the individual, rather than the disease, patients with virtually any condition may benefit. While Cranial Osteopathy is not a cure-all, the cranial concept often has provided a missing piece of the puzzle for many patients suffering from a wide range of symptoms that continue to challenge physicians in all specialties.

When Is Treatment Indicated?

Cranial Osteopathy can be used from the moment of birth until the end of life. Because children are so vital and quick to heal, osteopathic treatment can produce surprising results. Infants who suffer from birth trauma can potentially be spared life-long handicaps by being diagnosed and treated before the bones and fascia become set in a distorted pattern. Since the ability to heal persists throughout life, patients of all ages can benefit from this gentle treatment approach. This is especially true for those that are sensitive or when injury or pain might make other hands-on treatment approaches difficult or intolerable. Each patient is unique with his or her own constitutional vitality and history of trauma. Consequently, each patient will respond differently to treatment.

What Problems Are Most Commonly Treated?

Dental

Orthodontic Problems

TMJ Syndrome

Malocclusion

Digestive

Constipation

Irritable Bowel Syndrome

Nausea

Ear, Nose, and Throat

Chronic Ear Infections

Chronic Tonsillitis

Sinusitis

Genetic

Congenital Malformations

Down Syndrome

Genitourinary

Bedwetting

Prostatitis

Stress Incontinence

Neurological

Dizziness and Vertigo

Head Trauma

Migraine Headaches

Post Concussion Syndrome

Post-MVA Inertial Injury (Whiplash)

Seizures

Visual Disturbances

Orthopedic

Kyphosis
Lordosis
Postural Imbalances
Scoliosis

Pediatric

ADD, ADHD
Autism
Behavioral Problems
Cerebral Palsy
Colic
Developmental Delays
Failure to Thrive
Learning Disorders
Otitis Media (ear infections)
Plagiocephaly (misshaped head)
Spitting Up
Strabismus (Crossed-Eyes or Lazy Eye)
Sucking Difficulties

Pregnancy

Back Pain
Groin Pain
Varicose Veins
Prevention of Labor Problems

Psychiatric

Anxiety
Depression
Post Traumatic Stress Disorder
Sleep Disturbances

Respiratory

Allergies
Asthma
Bronchitis
Frequent Colds
Recurrent Sore Throats

Somatic

Arthritis
Fibromyalgia
